📌 Design Add to Cart Button #155 in DevOps	🆕 New	Updated 9m ago
📌 Implement Search Logic #154 in DevOps	🆕 New	Updated 9m ago
📌 Build Search Bar		

PART 2 - Azure DevOps Git Setup

1.Create a Git Repo

PART 3 - Configure CI/CD Pipeline

Step-1: Select the Version control system (VCS) to continue. In my case it is Azure Repo Git.

Step-2: Select the respective repo at which the code, datasets are present. In my case it is present in HexaDevOps

Step-3: Then select python package to configure the pipeline.

Step-4: Ensure the YAML file configured properly

Step-5: And then we can see the summary of the pipeline and it is scheduled to run with the configured agent.
